

NFC enabled bussiness card

smart products from COMEX

NFC Business card

COMEX introduces into the market new concept of electronic business card based on RFID technology. Inside of the card NFC enabled chip NTAG216 from NXP is installed. With its 888 bytes of memory, UID mirroring and NFC counter is forms a perfect solution to store electronic version of business card data. With single RFID reading with NFC enabled mobile phone all the data is transferred to your phone and further on to your computer in most popular VCard format. No more typing down info from business card to your computer.

RFID applications

Primary RFID applications were mostly deployed in access control systems. Nowadays, the field of applications becomes more and more miscellaneous – from libraries, documents marking, track&trace applications to pharmaceutical industry and logistic systems. RFID tags are the warranty of logistic processes speed-up, unique identification and protection against counterfeiting and theft.
